Traco Octopus MCC UX Client

Online newsroom management system in Avid

Our Traco Octopus MCC UX Client integrates the Octopus NRCS into Avid MediaCentral to provide editors with remote access for importing, managing and organising news reports.

Simply put, Traco Octopus gives editors the power to report professional standard live news, anywhere, anytime.

Application features:

Traco Octopus features
Traco Octopus MCC UX Client makes it simple for you to manage and organise your news reports online and gives editors full flexibility to make adjustments within the interface.

Importing and managing MOS objects
An important feature of the Traco Octopus MCC UX Client is its ability to attach sequences or "master clips" as MOS objects, which can be adjusted as required. To simplify workflows, video sequence can be imported from Interplay PAM using the "drag and drop" function. The Traco Octopus client application is also available directly through the Avid MediaComposer editing room. You no longer have to make compromises, all reports are now available in your editing room and you can work with them interactively.

Using Viz Pilot Graphic in Traco Octopus app
Traco Octopus MCC UX Client makes it easy for editors to create graphic lower 3rd with Viz Pilot MOS objects, provided by Traco GFX. A major advantage of this integration is that MOS objects directly align with the Avid timeline.
